

Instructions how to install PyMOL 3.1

- Open the PyMOL Download webpage: <https://www.pymol.org/#download>
- Click on your operating system to *download* the right file:

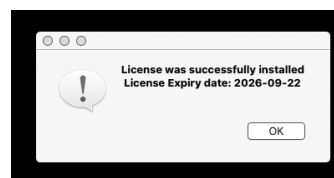

- **For Windows:** Click on the Windows EXE Installer icon, and the download will start within some seconds. Then, execute the .exe installer and follow the setup wizard.
- **For MacOS:** Click on the macOS icon, and download the .dmg file. Then double-click the .dmg file and drag the PyMOL icon to the applications folder.
- **For Linux:** Click on the Linux icon, and the download will start immediately. Go to the Download folder and unpack the .tar.bz2 file, e.g., using the following command:
 1. Unpack the .tar.bz2 file, e.g.: `tar -jxf PyMOL-2.2.0_0-Linux-x86_64.tar.bz2`
 2. Run PyMOL with: `cd pymol; ./pymol`
- **All:** Save the license file *pymolLicenseFile.lic* in the **GitHub** to your computer. Check that the file name is *pymolLicenseFile.lic* on your computer. NOTE: If the file name ends with .txt, remove .txt and change to .lic.

- Double-click the PyMOL icon and follow the instructions in the figure below:

- Select **Browse for License File**
- Open the *pymolLicenseFile.lic* file that you saved earlier

1. Close PyMOL. Test double-clicking the PyMOL icon again and PyMOL open.
2. The license file is valid until for non-commercial education and research

Congratulations, now you have installed PyMOL!
